

Support in the preparation of requirement specifications for the future WMS / FGS

Initial situation

- Leading, internationally active company in the non-ferrous metals industry
- OTTO FUCHS manufactures high-quality semi-finished products, metallurgically sophisticated forgings, extruded products, rolled rings made from a wide range of alloys
- Worldwide customers in the aerospace, automotive, construction and industrial technology industries
- Headquarters in Meinerzhagen, extended several times, mainly manual material handling, very many Floor conveyors in use throughout the plant
- New IT system for process and inventory transparency as well as for internal transport control needed, since software used so far could not meet the existing requirements

Project content

- Support in the preparation of the requirement specifications by »Team warehouse logistics«
- Iterative review loops in close cooperation with OTTO FUCHS
- Focus: Completeness of content, definition of requirements, joint elaboration of specification contents

Results

- Fully comprehensive requirement specifications for use in the tender process
