TRANSPORTATION

SOLUTIONS FOR TRANSPORTATION MANAGEMENT.

Where are the despatched goods? Is the load optimised? Will it arrive on time?

The adoption of **digital technology** for **sharing information and optimising processes** makes it possible to answer these and many other questions, simplifying the complexity of distribution logistics.

With its specific **Transportation** software and integrating cutting-edge technology, Onit supports companies in a process of continual improvement geared to **operating efficiency, quality and safety of processes**.

|	
Planning	The journeys for collecting and delivering products are planned in a way that optimises the routes and complies with constraints in the most efficient way thanks to the support of special online maps and Machine Learning algorithms.
3D Loading	3D graphics simulates the correct loading of the vehicle in order to identify the appropriate positioning and ordering of the goods on the loading bed and comply with constraints.
Carrier Portal	Accessing the carrier's reserved area it is possible to enter and keep continuously updated the documents necessary and to accept the journey requests.
Slot Booking	The suppliers / customers / carriers can book a time slot to go to the deposit for collection or delivery thus minimising waiting times.
Yard Management System – YMS	YMS organises vehicle access to the yard of the logistics site or warehouse, ensuring safety and eliminating queues.
Proof of Delivery – POD	POD monitors the progress of a shipment in progress and makes it possible to act proactively in the event of any non-conformities reported directly by the driver using his smartphone.
Cost Control	The cost of transport and packages exchanged are monitored, certifying the amounts and sending the pre-invoices or invoices to the service suppliers or the customers.
