

## WMS ready for Logistics 4.0!

An innovative software, that looks into the future

*"The best warehouse is the one that does not exist"*

*"Warehouse 4.0 will be connected to the external world and it will be controlled by systems"*

These assertions are opposed: on one hand, warehouse optimizes itself in terms of spaces and costs by **minimizing stocks**, so it is better to keep a lean warehouse. On the other hand, the warehouse has to provide **availability** and **responsiveness**, with **automatisms and interconnections to the external world** never thought until today.

**Logistics** should **evolve from cost to profit centre** and, to do that, it can follow two main streams: **automation and integration**.

**MOX SOLUTIONS**, specialized in **automation and integration processes**, suggests **STOCKFORCE** solution for any type of company that needs to **manage operational flows** and **items in warehouse** in real time, everything integrated with ERP system and e-commerce site.

# STOCKFORCE product

- ✓ developed with **"web oriented"** technology
- ✓ interfaced with **all mobile platforms** (from Microsoft systems to the recent Android ones)
- ✓ it offers **ergonomic interfaces** on different types of devices (**PDA's, tablets, smart devices**)

- ✓ **intuitive look**, sound notifications when certain events occur, attention to functional screen details proposed by STOCKFORCE, all this allows to reduce the training time of the warehouse staff
- ✓ **all the most common types of barcodes / QR-codes**, including GS1/UCC 128 codifications, are managed
- ✓ **notification system that can be integrated with logistics flow** to report in real time to the staff occurrence of meaningful events (order completed, product out of stock, low level of item stock, mission not yet activated, etc.)

## Benefits and Functionalities

---

- ✓ **warehouse is integrated with e-commerce sale processes**, speeding up to the order fulfillment
- ✓ WMS system manages **missions activation independently**, with user-defined logics
- ✓ the system **is configured accordingly to the operation type** and not vice versa
- ✓ **quick integration** with major **carrier providers**

- ✓ **automation** on order portfolio with **analysis and planning of all delivery dates**
- ✓ **WMS activities** customizable according to logistics company flows
- ✓ specific functionalities for **shelf-life, batch management, serial and path number management, kit management**
- ✓ **batch reservation** for specific customers and **location reservation** for specific items, **payload unit management**, receiving note via web console
- ✓ **Statistic reports** for logistics activities and analysis in goods flow

## Our products

- Catalog
- Product Data Management
- Dynamic filters
- Product comparison
- Dynamic content reports

**ShowK** | Show and sell your products

- Off-line sales orders
- Daily schedules and maps
- Receipts management
- Multimedia Catalog
- PDF orders

**SellMore** | Mobile and Offline Sales Force Automation

- Optimized picking
- Simultaneous picking & packing
- Cycle counting for inventory
- Batch and serial number management
- Label printing from any industrial printer devices ZPL compatible

**Stockforce** | Move and control products in your warehouse

- Delivery planner
- Dynamic orders reservation
- Automatic mission release
- Control of picking activities

**Stockforce Plan** | Plan, release and control warehouse activities

- Easy and fast solution for Industry 4.0 certification
- Through MOX.BOX hardware, quick installation
- It connects itself to most existing PLCs: view the data and the certification is done!
- Tablet devices for data entry if there is no machine interface

**4.0 FACILE** | We satisfy all Industry 4.0 requirements

- Multi device
- Managed by roles
- In/Out quantities and execution times factory tracking
- Component label print
- Batch and serial number tracking

**Factory** | Automate manufacturing execution system

### Integration

- Multi ERP integration
- Multi device
- Multi platform
- Native cloud solutions
- Open source technology
