## Flexibility & Scalability

The right app for every function. Simply book and pay for what you need.

## Hosting & Security

Monitored data centre, backups & SSL. We host in our own data centre in Germany.

## Cost savings & Transparency

Easy, web-based use. No complex IT administration.

## Network it all - integrate it all... This is our motto

In the logistics mall, software providers do not offer complete modules, but single apps. The user can rent those apps. It is thus no longer necessary to buy software licenses. This results in a perfect cost-benefit ratio when implementing new software and processes. Apps are compiled individually and independent of the provider.

### Flexibility & Scalability

The apps communicate with each other via a common BUS. This allows for integrated processes that can be flexibly controlled.

In the central user management area, you can quickly create new user accounts and assign permissions just as required.

### Hosting & Security

Apps in the logistics mall require a runtime environment. The runtime environment for your logistics mall apps is called the Managed App Server. It is a virtual server that contains everything you need to install and use apps.

The technical operating model is based on latest cloud technologies and also scales according to your requirements. In our data centre, all customers get their own Managed App Server where all business data is encapsulated. Thus, third parties won't get access to your data.

If you prefer to host a server yourself, no problem! We offer interesting corporate cloud operating models. Data security is a huge priority to us. All connections with logistics mall apps are SSL-encrypted.

### Cost savings & Transparency

The use of the logistics mall offers cost benefits and savings potential. You do not buy any software licenses, but you rent apps and only pay what you use. The usage fee already includes a basic support.

The specific pricing model is defined by each app or by the provider. We as the operator and your IT department operate the applications. This results in cost benefits. As you pay for each user and/or transaction, you will always have full cost transparency.

The logistics mall offers top performance at a fair price. We will be happy to calculate your potential savings together with you.
