

Our Mission

Egemin Automation supplies advanced automation solutions that bring added value to the internal logistics and business processes of industrial companies. Our solutions are mainly based on own and third-party products and technologies. We deliver made-to-measure solutions that get our customers one step ahead of their competitors. To achieve this, we strive for early involvement in the projects of our customers. In this way, we want to help them in realizing their strategic objectives.

The right project choice

The success of an automation project depends to a large extent on choosing the right partners from the early start. Egemin Automation is a professional project organization that supports its customers from A to Z in order to realize their automation objectives. We have an extensive project experience of more than 60 years which we have gathered in modular concepts. This helps us to design, integrate and maintain automation solutions in a much faster, cheaper and better way. That's our mission and passion, getting your project done.

Three core activities

We support our customers throughout the entire track of their project, from design stage over project execution to after-sales service. Our three core business activities are:

- » Consulting – industrial no-nonsense consulting
- » Automation Products & Solutions – all-inclusive automation projects
- » Life Cycle Services – maintenance, interventions and retrofitting of technical installations

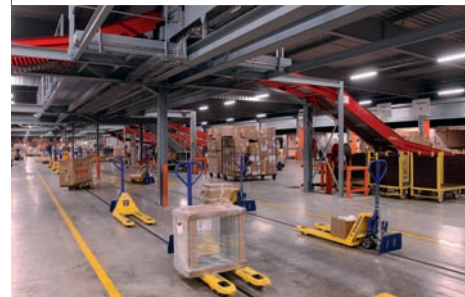

Value-driven organization

Egemin Automation attaches great value to its three basic values: Passion, Performance and Partnership. We are impassioned about automation and take pride in the work we deliver. What we do, we want to do good as efficiently as possible. And last but not least we recognize the importance of teamwork, between our colleagues internally but also in our relationship with customers, suppliers and partners.

Worldwide presence

Egemin Automation operates internationally from its headquarters in Belgium and 6 other locations spread over Europe and North America. In other parts of the world we work together with agents and licence partners. We have a worldwide staff force of approximately 550 knowledge workers.

Passion for Performance in Partnership

Delighted customers, what we live for

An important share of our business is built up by relationships who commit their projects repeatedly to us since many years. What's more, customers also ask us to join them in their projects abroad. This is an important explanation for the worldwide presence of Egemin Automation in the farthest corners of the globe. We can therefore say that our business is driven by delighted customers. And we want to keep it that way. That's why we continuously invest in new creative solutions that make up the difference for our customers.

Four divisions

From an organizational point of view Egemin Automation has structured itself in four core divisions:

- » Handling Automation
- » Life Sciences
- » Process Automation
- » Infra Automation

Handling Automation - Internal logistics automation

The Handling Automation division designs and integrates automation concepts for automated material handling in warehouses, distribution centres and production environments. Our total solutions allow for seamless and fully automatic settlement of the internal transport, storage and order picking within companies. Our solutions are based on three main product lines:

- » E'wds (warehousing & distribution)
- » E'gv® (automated guided vehicles)
- » E'tow® (towline systems)

Life Sciences - Validation & automation services for the life sciences industry

The Life Sciences division of Egemin Automation supplies GxP advice in validation and compliance for clients from the pharmaceutical industry, the biotechnological sector, and medical devices. In addition, the division also provides automation solutions for the life sciences market.

Process Automation - Automation of production processes

The Process Automation division serves production companies with a continuous or (semi-)batch production, such as semi-manufactured goods in bulk and consumer products. Companies such as food producers, chemical and petrochemical plants, tank terminals, and utility companies can turn to the Process Automation division for process engineering and automation systems to management information systems and process refinement.

Infra Automation - Automation of infrastructure works

The Infra Automation division focuses on electromechanical automation of major infrastructure works such as bridges, locks, tunnels, and pumping engines. In addition, Infra Automation also supplies communication systems for security and remote control (voice over IP and video over IP) and contracts complete projects including civil works and steel construction control).
