

CONTRACT AND BILLING: EPG | CnB

YOUR ALL-IN-ONE SOLUTION FOR DIGITAL BILLING AND CONTRACT MANAGEMENT

EPG[®] CnB

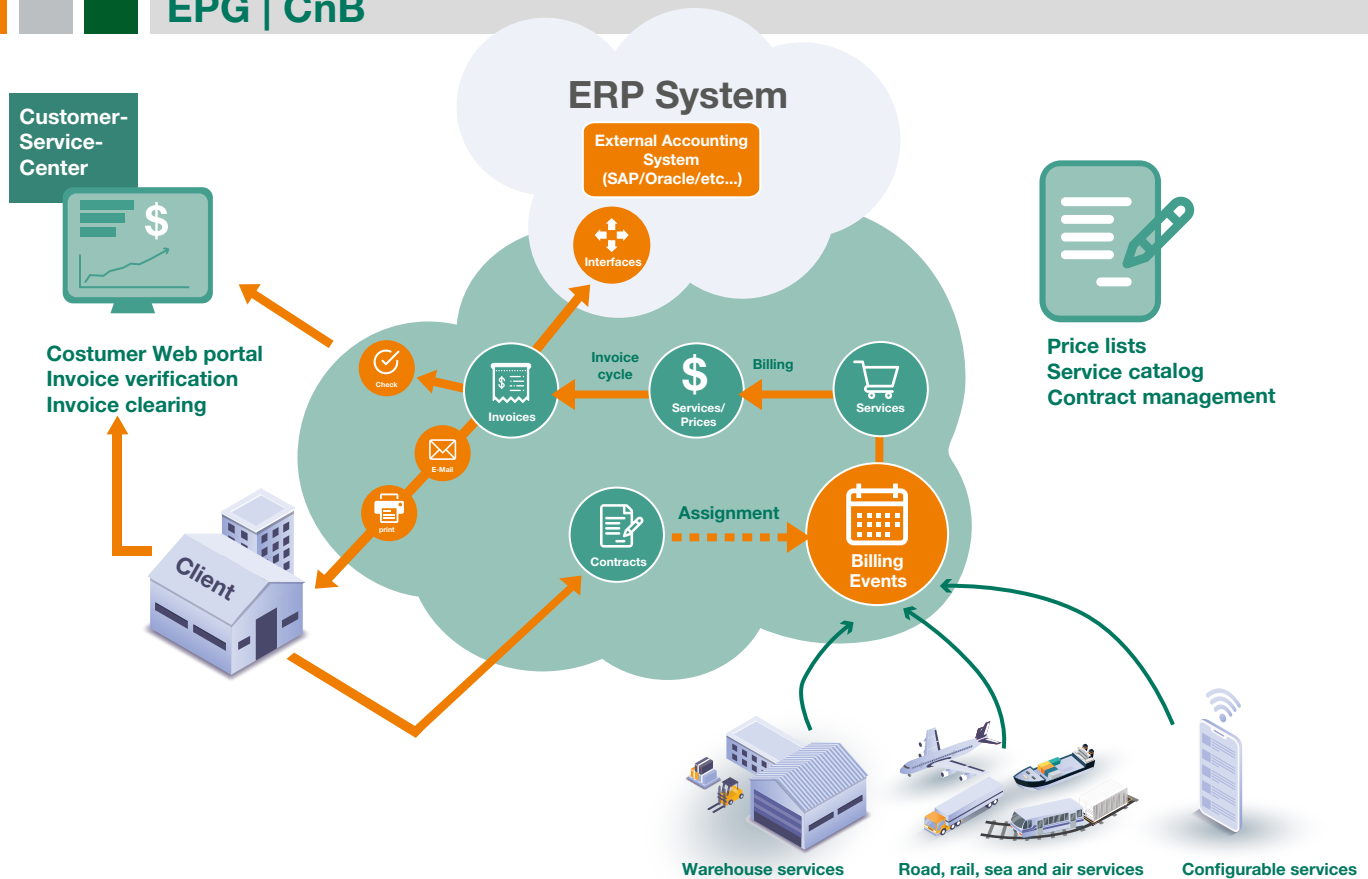

- ✓ Complete recording and billing of all services provided at the right price
- ✓ Smart contract management with template and version management, including tracking changes and attachment function
- ✓ Additional documentation and billing of services that go beyond the original contract
- ✓ Service registration across the supply chain – via interface or mobile app
- ✓ Automated invoicing with subsequent invoice verification by the customer in the customer web portal

FAST AND COMPLETE BILLING OF ALL SERVICES

Do you really invoice all services with your customers and suppliers? Even those that go beyond the original contract? And do you sometimes wait far too long for your customers' incoming payments?

In order to keep an overview in the almost opaque jungle of information, individual agreements and billing conditions, EPG | CnB offers the solution: The software provides powerful modules for all work and process steps for billing management of all logistic services - from contract design and continuous service registration to contract allocation and automatic invoicing. The decisive advantages: EPG | CnB ensures that all services within the agreed contracts are billed quickly and completely at the right price. EPG | CnB also documents services that have been provided beyond the original contract and invoices them reliably. By using EPG | CnB, customers reduce the complexity within your ERP system since time-consuming and cost-intensive process adjustments are no longer necessary.

Smart Contract Management:

- integrated contract template management
- fast and secure documentation of additional services
- version management of the contracts incl. change tracking
- Documentation management for SLAs
- approval workflow for a defined group of recipients with e-mail notification and comment function

Cross-supply chain service entry:

- over 500 services from logistics available
- registration of all services provided
- warehousing services, such as goods receipt, stock transfers, order picking or packaging as well as value added services
- road, rail, sea and air services, such as container unloading, returns, tolls, waiting and downtime

Automated service processing:

- automatic contract assignment
- automatic calculation of the service prices
- integrated foreign currency management
- Weekend and overtime allowances
- Consideration of e.g. price index clause for automatic price adjustments
- Releases for billing

Automated service billing:

- Automated billing run
- Audit-proof certified according to IDW PS 880
- Transparent and simple invoice verification for customers in the customer web portal
- Accelerated release process for faster receipt of payments
- Generation of customer-specific invoice documents with proof of performance as an attachment (PDF, e-mail dispatch, electronic invoice format)

BENEFITS AT A GLANCE:

- **Increased revenue** thanks to process-safe billing - no service is forgotten
- **Automated service registration and allocation as well as billing** of all services actually performed
- **Service entry** at the place of service provision via mobile app
- **Fewer customer complaints and queries** through transparent invoice verification in the customer web portal
- **Faster receipt of payments** by avoiding credit, cancellation and retro-billing runs
- **Reduction of complexity in the ERP process world** – no expensive adjustments necessary
