

Westernacher Consulting - The right solution for every warehouse

Warehouse Logistics

Warehouses differ from each other in their unique requirements:

Spare parts warehouses have a large diversity of heterogeneous parts and require timely fulfilment of time-critical orders

Production supply warehouses need high availability that is integrated with automated production systems

Retail warehouses require integrated planning of picking and transportation and variable composition of packages

Distribution centres have a high turnover of goods and often require cross docking functionality

Westernacher Consulting is proud to have the right solution for every warehouse. We rely on three products to achieve maximum flexibility and an optimal fit to our customers' needs:

EWM

The Extended Warehouse Management from SAP, which because of its breadth of business processes and functionality is suitable for any larger warehouse in almost any industry.

LES

The well known Logistic Execution System from SAP with its components WM and TRM, which can be successfully used for warehouses without special requirements on processes and performance.

WLS™

Westernacher's own warehouse management solution including integrated material flow control based on SAP Netweaver technology. WLS focuses on highly automated warehouses that require a large number of customer-specific processes.

Westernacher Consulting

The right solution for every warehouse

Westernacher Consulting specializes in warehouse automation and covers automated transportation of handling units between locations, automated storage and retrieval of pallets, as well as automated sorting, labelling and staging of goods. Warehouse automation decreases inventory handling and therefore damage to goods, decreased personnel and labour costs, improved efficiency and accuracy, and increases throughput. Westernacher Consulting provides integration of automation technology such as material flow control systems (MFS) together with all of the above solutions.

Beyond this, Westernacher Consulting provides consulting services that cover the end to end field of the warehouse business:

WESTERNACHER CONSULTING SERVICES

- Integration of **RF technology**, 'Pick by voice' and 'Pick by light' systems, RFID etc. with SAP systems
- **Process integration** with other SAP modules, e.g. MM, SD, PP, PS, PM, LE, SCM, CRM, BW, SPM
- **Training and organization** of warehouse staff
- **Warehouse Optimization** to increase efficiency and security

To help you to improve your business processes and your service levels, Westernacher Consulting will analyze your needs and advise you how your requirements can best be achieved. We will guide you from package selection, through implementation and to verification of your key indicators. Warehouse Management Consulting should be left to the experts -

**we are your reliable partner in
Warehouse Logistics.**
