KiSoft Management Information System KiSoft Workforce Management System KiSoft Track & Trace	

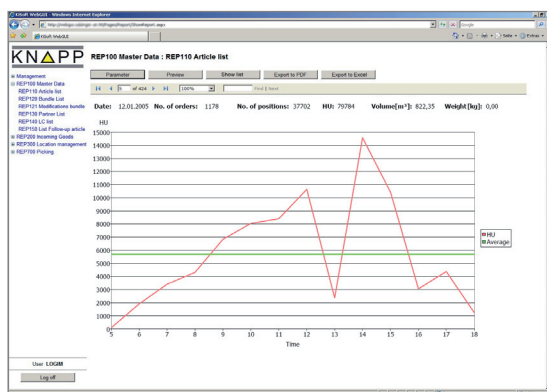

KNAPP stands for warehouse management solutions. Benefit from our product range that can be adjusted to your needs anytime. KNAPP is an investment for the future.

30% FASTER PICKING WITH KISOFT WMS

The KiSoft WMS online picking systems not only lower the picking time by 30% but they also reduce the error rate by at least 75%.

KiSoft WMS offers different picking techniques, which can be used simultaneously in the warehouse. Depending on your warehouse topology and your assortment, techniques like e.g. Online with Terminal, Multi Order Picking, Voice Directed Picking with Pick-by-Voice, Elektronic Picking List or Pick-by-Light will certainly fulfil your needs.

TRANSPARENCY IN THE WAREHOUSE WITH KISOFT MIS

Your decisions should be based on the thorough know-how of your warehouse processes. KiSoft Management Information System (MIS) can supply you with this know-how. The extensive system of key performance indicators does not only provide standard evaluations of the warehouse processes currently taking place, it also allows you to take a look at the past and catch a glimpse of the future.

The long term monitoring of your processes and prognoses, which are based on the accumulated data, allows you to ideally design your processes in the future.

90% LESS INVENTORY EFFORT WITH KISOFT WMS

KiSoft WMS makes a full manual inventory, which usually implies several days of total standstill in your warehouse and at least once a year the payment of overtime premiums and possibly public holiday premiums, a thing of the past.

An ideal mix of the inventory methods that KiSoft WMS puts at your disposal decreases the annual inventory effort by 90% and at the same time increases the quality of your customer supplies due to an accurate stock by means of permanent inventory, zero inventory, inventory sampling procedure, article inventory, location inventory and list inventory.

FAIR BONUSES WITH KISOFT WFM

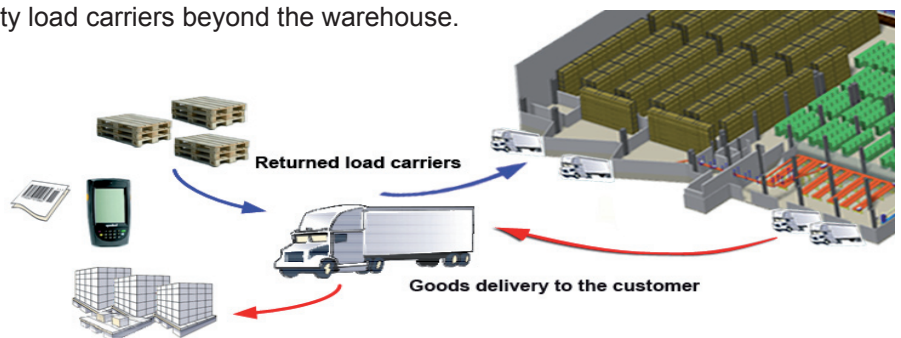

Opt for transparency and productivity measurement (REFA target times) – because you can only optimise what you can measure!

KiSoft Workforce Management System (WFM) calculates the target times for all tasks, which a logistic company carries out and establishes the bonuses per employee by comparing the target times with the times actually needed. Group and average bonuses are taken into account as well as quality reductions or credits.

Lower your personnel costs further with the personnel placement planning module and arrange to finish all your jobs in time.

TRACEABILITY BEYOND THE WAREHOUSE WITH KISOFT TRACK&TRACE

Warehouse management and warehouse optimisation do not stop at the delivery of goods. KiSoft Track&Trace provides you with an automatic trace of the shipment and enables you to keep track of your goods and your empty load carriers beyond the warehouse.
