

Strategic WMS Pre-Selection for cargo-partner GmbH

Initial situation

- Cargo-partner GmbH is a logistics provider with more than 140 locations in 40 countries that handle a wide variety of logistics processes for diverse industry sectors e.g. spare parts logistics, FMCG or e-commerce.
- The introduction of a new Warehouse Management System (WMS) is planned at all locations. The future WMS should meet the current and long-term requirements.
- In order to elaborate a shortlist of possible WMS that meet the functional and non functional requirements of cargo-partner, a strategic WMS pre-selection was conducted.

Project content

- Definition of functional and non functional requirements with regard to relevant industry sectors
- Benchmarking of WMS and providers using the »WMS Online Selection« and detailed research on their characteristics

Results

- Shortlist of possible WMS and providers that meet the non functional and functional requirements of discussed industry sectors
