

Manhattan store solutions are built on the foundation of our Enterprise Order Management application—modern retail's system of record for customer transactions, inventory and execution across the network.

Together, these solutions offer the most comprehensive selling, service and fulfillment suite on the market—allowing you to build your roadmap on a common set of technologies to lower total cost of ownership and increase speed of deployment.

The digital store has arrived. We're ready to start when you are.

THE DIGITAL STORE HAS ARRIVED.

Associates®

1 - Clienteling

Deliver a personalized selling and service experience to your customer with appointment scheduling, a holistic view of her purchases and returns across channels, and insight into her online wishlist and shopping cart. Leverage your digital store assets and sell your extended aisle assortment directly from a mobile device.

2 - Store Fulfillment

Enable store associates to quickly ready orders for pickup and shipment. Produce all required shipping documentation, including carrier-compliant shipping and return labels. Perform batch picking to improve efficiency and enable dynamic order prioritization to improve customer service.

3 - Point of Sale

Enable your store associates to 'sell the network' by placing orders for pickup in store or through expedited shipping. Perform checkout anywhere on the store floor on a mobile device or at a cash wrap. Accept all tender methods securely and perform omni-cart/single-swipe transactions during checkout.

4 - Tablet Retailing

Quickly and easily publish digital assets to your stores. Enable your customers to browse your extended aisle catalog on a large touchscreen and your associates to watch a training video on a smaller device. If you've got the asset, we've got an easy way to put it in the hands of your customers and store associates.

5 - Store Inventory

Improve store inventory accuracy with mobile-based receiving, cycle counting and inventory adjustment capabilities. Act as the perpetual system of record for store inventory and publish store inventory events in real-time to merchandising and financial systems.
