

Stockforce

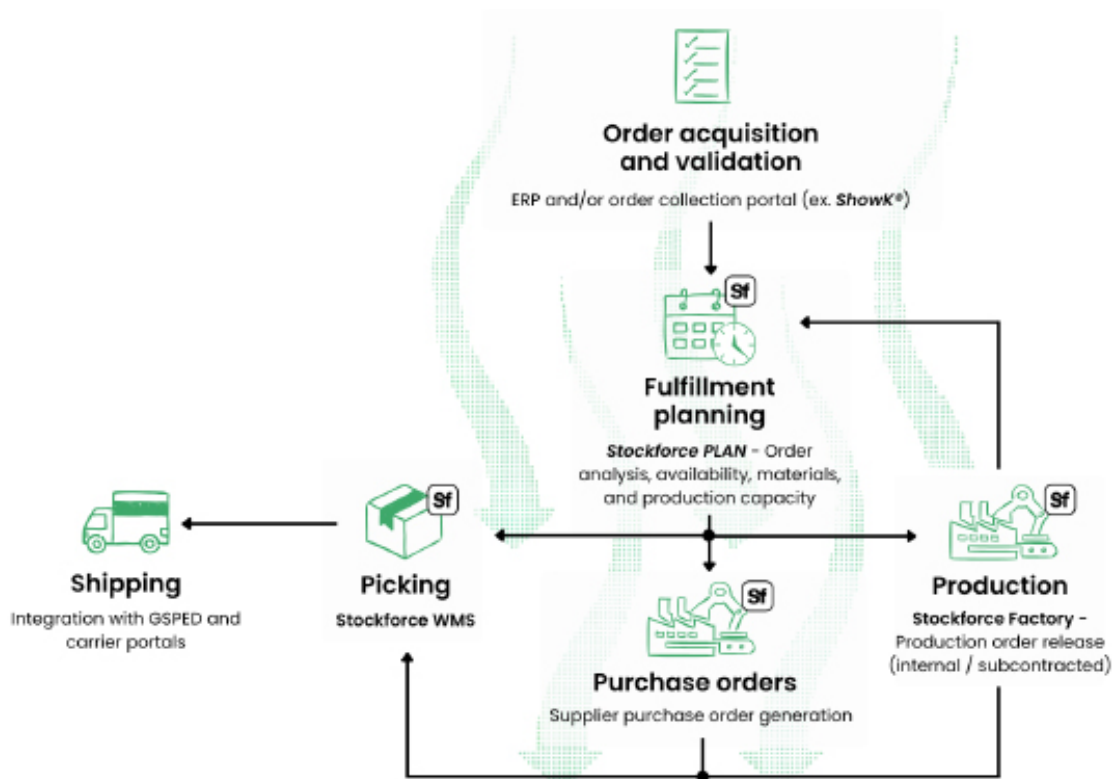

The complete,
modular platform
for supply chain
management,
warehouse
operations, planning
and production

**SMART
LOGISTICS**

More flows, one platform

Stockforce is an industry-specific platform that manages logistics and production flows, designed to coordinate warehouse and manufacturing operations within a single ecosystem. It is an advanced, **modular** and departmental solution, built to manage the entire operational process or address specific functional gaps.

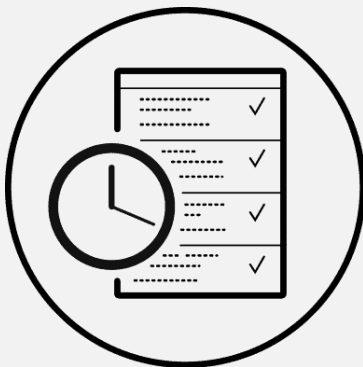

Come and discover the [ShowK® suite](#)! Integrated with Stockforce, it extends functional coverage to commercial processes, from pre-sales to after-sales, providing a complete and unified view of the entire chain.

Everything under control. Wherever you are.

Stockforce is available via web and client access, supporting both operational users and back-office teams. Through web access, you can monitor warehouse status and logistics processes anytime, even outside the company. All key information is always available, wherever you are.

WMS

Stockforce WMS (Warehouse Management System) is the solution for managing, controlling and optimizing warehouse operations. It improves operational efficiency by providing real-time traceability, reducing errors and ensuring full visibility across logistics flows, while optimizing time, costs and business resources.

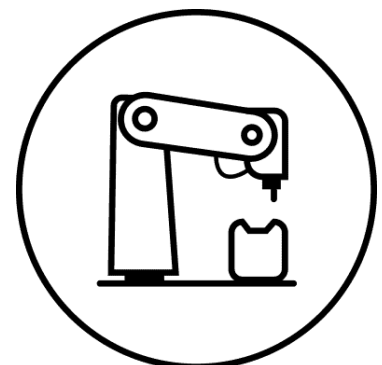

PLAN

With Stockforce PLAN, you can plan, manage and control order fulfillment, stock allocation and production-related flows. It also provides visibility over warehouse activities, enabling smoother and more efficient operations.

FACTORY

Beyond MES (Manufacturing Execution System). Factory is the solution for managing and controlling production processes, bringing all manufacturing operations together in a single digital hub. More visibility, more control, better performance.

Manage warehouse activities

Control your warehouse, plan shipments and reduce operational time and costs. A WMS with integrated AI that improves operational efficiency while ensuring real-time traceability, error reduction and full visibility across logistics flows.

A quick glance at Stockforce WMS

Whether your company is a **SME** or a **multinational enterprise**, Stockforce is designed to deliver **advanced, fast and flexible automation**. It optimizes warehouse operations in a simple and continuously updated way, helping transform warehouse management into a driver of improved margins.

*A WMS performs
at **its best** when it
can **communicate**
continuously and
seamlessly **with the ERP**,
the core of the company's
information system and
the central source and
destination of the data
that supports day-to-day
operations*

Plan orders and deliveries

Analyze your order portfolio, availability and customer priorities in real time, optimizing order fulfillment and stock allocation while generating reliable delivery plans. Plan material flows for production and shipments while ensuring full visibility and on-time delivery.

A quick glance at Stockforce PLAN

Do you have this product available in stock? Is it available in remote warehouses? Are there ongoing production orders that could fulfill the request? Can the item be purchased externally? Which customer should be prioritized? Stockforce Plan answers all these questions to optimize order fulfillment and planning decisions.

SMART INTER-PLANT TRANSFERS

*Having everything under control from a **single console** means monitoring orders, production and availability in real time, while keeping the digital view aligned with what is actually happening in the warehouse and across the supply chain. This makes it possible to **take action at the right time** and keep customer promises.*

FACTORY

From planning to execution

Monitor production processes in real time, optimize resources and materials, and coordinate every production phase from a single digital hub. Focus on control, visibility and efficiency.

Your new **Production Hub**: all operations in one digital platform

Access real-time production data, identify potential issues before they become problems and improve operational performance through reliable and shared information. Reduce machine downtime, optimize the use of materials and resources, and improve coordination between departments and subcontractors. With Stockforce Factory, every process is traceable and every decision is supported by data.

NEW PLANTS INTEGRATION

*Bringing all operations together in a single **digital hub** means coordinating orders, production lines, materials and subcontractors within a continuous flow, with **data** that is always **up to date** and available in real time. This makes it possible to monitor every activity, respond quickly to unexpected issues, and maintain full control over production progress, quality and lead times.*

Stockforce is...

a proprietary solution that is highly customizable, scalable and easy to integrate with existing systems, designed to reduce costs and maximize supply chain efficiency.

INTEGRATED

The WMS integrates with the company's ERP, shipping management platforms (GSPED, carriers, etc.), automated and vertical warehouses, and other existing IT systems such as CRM, MES and eCommerce platforms.

MULTI & SCALABLE

Stockforce supports multiple sites, warehouses, companies, languages, markets, units of measure, devices, barcode readers and users. Designed to grow with your business.

MODULAR

The platform is modular, allowing you to implement only the components you need and scale them up or down as your requirements evolve.

INDUSTRY SPECIFIC

Every industry has its own requirements, and so does every product. Stockforce is a WMS designed to adapt to the specific characteristics and needs of your company and industry.

VERSATILE

Stockforce supports existing processes. The platform integrates seamlessly into current workflows without rigid structures or forced changes. A smart, flexible approach to introducing warehouse automation gradually.

PLUG & PLAY

Stockforce can be deployed quickly, even in complex environments. With just a few configuration steps, warehouse operators can start working independently and safely.
