# COMPANY PROFILE AND ORGANISATION

Beta 80 Group has been working in ICT for over twenty years.

Gradual but constant growth, a consistent development model and stability on the stock market are the cornerstones of its success. The wealth generated has been reinvested to encourage the development of precise business lines and the targeted acquisition of external companies. All these operations have been conducted to the highest technological and business standards and without changing the original ownership.

Business volumes have increased without diminishing the organisation's stability. Beta 80 Group ranks amongst the first 100 ICT companies in Italy: this achievement was reached by following a specific strategy made of stable growth and the promotion of in-depth knowledge. A result which enables Beta 80 Group to be the reference partner for firms seeking to plan and implement a corporate development strategy.

## SOLUTIONS AND CONTENTS OFFERED

Beta 80 Group contributes to enhancing its clients' economic and organisational value. Projects are developed in line with the company's corporate principles:

**Constant interaction with the client.** Only if we really understand our clients' needs can we find the best way to satisfy them.

**A passion for concreteness.** Best solutions and consistent scenarios cannot be achieved if technology does not have a concrete purpose.

**Awareness of the result.** Flexible projects and adaptable strategies associated to clear aims.

Beta 80 Group offers its clients proprietary solutions and extremely high added-value services: business and system integration, consulting, process analysis, architecture planning, design of applications, maintenance and on-site monitoring.
