General Contractor

Optimization of space, time and resources is our contribution to your success.

As a general contractor with overall responsibility, Stöcklin Logistik AG offers complete turnkey systems, enabling space-saving storage and reliable management of your products, as well as rapid transport and picking with minimum personnel costs.

As a system integrator, we offer you complete logistics concepts, including provision from a single source. Depending on your needs, this means Stöcklin is at your disposal as your sole contact partner coordinating all types of work for you, from floor slab construction, via ventilation through to installation of lights, or we assume overall responsibility for all in-house logistics issues and work with a general contractor for construction.

Our developments over recent years provide you with tangible added value. Optimization of your in-house processes supports you in working more sustainably and cost-effectively. This means you are at the cutting edge of goods handling when it comes to your systems.

It is also our objective in the future to optimize the intralogistics processes of our partners and together to take the availability of your goods into the leading position - in line with our motto "Climb to the top".

Intralogistics Systems

Whether you have a pallet or small parts warehouse, channel or deep-freeze storage – Stöcklin's intra-logistics systems meet every requirement.

Our MASTER series for fully-automatic pallet storage which is constantly being further developed, the energy-efficient BOXer stacker crane for cartons and boxes and the PowerShuttle for multiple-depth storage enable Stöcklin to offer a complete range of products fulfilling all specific requirements in terms of storage height, load and operating convenience. Modular design conveying equipment and ergonomic picking solutions complete our range.

Our systems focus on product availability, sustainability and efficiency - so that our customers can always stay at the cutting edge in their sector.

"Industry 4.0 requires ever higher product availability with costs kept to a minimum - our systems are equal to this challenge. Our flexible mindset enables us to respond to new challenges in a results-oriented way."

Urs Grütter, Chairman and CEO

Intralogistics Software

Our modularly-structured intralogistics software suite based on the latest development platforms and technologies means you are always equipped to meet the challenges of Industry 4.0.

StöcklinWMS, a warehouse and order management system, controls all intralogistics processes from goods reception through to goods shipment.

StöcklinWCS, a location management and material flow system for automated warehouses, can be controlled by the StöcklinWMS module or directly by a host system via transport orders.

With **StöcklinDMA**, we are pursuing the mission statement: "We bring your business to a higher availability". One tool enables the automated collection and monitoring of multiple evaluations and statistics over selected timescales, along with the provision of alarm notifications according to predefined rules.

Increasing system availability is the result of optimum efficiency and preventive measures. The technologies for Industry 4.0 are ready to go.

"Rapid technological development and the growing requirements for logistics software are always setting me new, enriching challenges. My motivation is to be constantly able to offer our customers the optimum solution for their needs."

Michael Huser, Member of the Executive Board
Business Unit Systems, Software and Services

Floor Handling Equipment

Stöcklin Logistik's floor handling equipment and automated guided vehicles (AGV) impress with a very high level of efficiency, innovation and safety. From the best high-speed manual pallet trucks through to automated guided vehicles, we offer you the full range of floor handling equipment. Under the motto "robust, compact and efficient", we manufacture high-quality storage technology equipment and special customer-specific equipment, along with stainless steel designs and an in-house ATEX series. Stöcklin is also the general importer for the domestic Swiss market of Hyundai counterweight stackers with load carrying capacities of 1 to 25 tonnes.

Stöcklin products and services guarantee low operating costs (TCO) and optimum availability.

With www.stoecklin-fleetcontrol.com, we offer our customers an integrated fleet management tool to optimize internal logistics, as well as to reduce and monitor stacker fleet operating costs.

"The multiple needs of our customers, but also the enormous range of our floor handling equipment's possible applications, mean I am faced with new, exciting challenges on a daily basis."

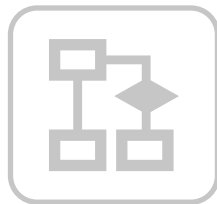

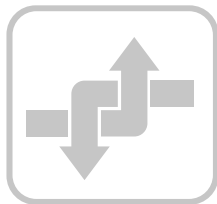

Valentin Adelfio, Member of the Executive Board
Business Unit Lift Trucks
