

# S&P Computersysteme GmbH

warehouse management software

# Software & process consulting for efficient Intralogistic

Since 1985, we have been implementing individual software and system solutions for demanding logistics tasks in companies of all sectors and company sizes that are aware of the importance and uniqueness of their logistics and want to gain a competitive advantage from it.

Listen - Understand - Implement. Actually quite simple? True, that's why the best solutions are also often quite simple. At least for the user - no matter how complex the software. This too must be taken into account when planning intralogistics solutions.

We face this demanding task with ever new enthusiasm. In spite of all our experience and all the standard building blocks we can fall back on, it is important to find the points where we can react even better, even more individually to the detailed task.

Even if your project is very complex and requires a high degree of automation, you have found a competent partner in us. We supply you with important software for logistics, ranging from warehouse management software, material flow controller, order picking systems, solutions in the field of solutions in the area of transport management and much more.

# Our philosophy

## **Trust through customer proximity**

Our experienced project teams accompany the customer in every phase of the project - a constant exchange between all project participants is a matter of course.

The employees who will later work with the solutions are integrated at an early stage, and they quickly notice: daily work becomes easier, quality becomes a matter of course. Even after commissioning, we offer support with our In-house support competent contact persons.

## **High expectations and requirements**

We have been meeting the demands of our customers since 1985, and they confirm us: when it comes to IT systems for intralogistic, S&P is an authority.

For our customers, we are a reliable partner from the very first hour - for demanding projects, but also for the small "logistical worries". We listen carefully when our customers formulate their expectations, and we accompany them from the very beginning with first-class service - from analysis to round-the-clock support.

## **Optimisation through flexibility**

Our flexible warehouse management software adapts to the business processes of our customers - not the other way around. Our modular software solutions take proven, existing processes and optimise them for more transparency and efficiency in the warehouse.

This means that SuPCIS modules can simplify management and speed up processes not only in new greenfield logistics systems, but also in existing warehouse plans - whether in manual or automated warehouses.

# Our references

The extensive experience in the realisation of standardised but customised warehouse management systems across all industries makes S&P one of the most important German suppliers of complex logistics systems.

Our customers trust in our professional and cooperative handling as well as our fast and competent service.

Every industry and every project has its own individual requirements. We take these into account and offer SuPCIS-L8, a warehouse management system that is modularly expandable and individually adaptable.

Our references are more than a list of installations and household names - projects that we are proud of and that reflect the success of our warehouse management software.

Below you will find an excerpt of our references:

# Our service portfolio

## Consulting

We support our customers in the planning and implementation of new warehouse management systems. We look at your entire logistics processes and develop solutions with foresight so that you are optimally equipped for the future. Together we analyse your existing business processes and find the right IT solution - in new warehouse construction or in existing logistics concepts. If you wish, we can also advise you on the appropriate hardware.

## Hardware

In addition to our application software, as we also supply complete turnkey systems with all with all the necessary components. We also offer maintenance and repair services maintenance and repair of the delivered of the delivered components. High availability, short repair times paired with transparent costs.

## Software

SuPCIS-L8 is more than just a warehouse management system as you know it from the common ERP and merchandise management systems. SuPCIS-L8 was developed as a modular system specifically to support and control processes in warehouse logistics systems.

In addition to warehouse and inventory management, SuPCIS-L8 also offers the following modules to optimise operative business transactions:

- Warehouse and material flow control
- Picking guidance system
- Forklift guidance system
- LogisEkleitstand

## Service

S&P offers a reliable and fast software service. Our in-house support team is familiar with the projects and guarantees competent service around our warehouse management systems. The service is guaranteed for all releases installed by S&P and is offered in adjusted time and billing models, adapted to the customer's needs. On request, 24 hours a day, 365 days a year.

Further services are provided either by S&P itself or as a sales partner of the respective hardware and system suppliers.

Our connections to the leading technology companies ensure direct assistance and fast support and the customer has only one contact: S&P.

# SuPCIS-L8

**proven**

At the moment, well over 5,000 workstations are operated with SuPCIS solutions. The warehouse management system has already been implemented in over 135 companies of various sizes. From medium-sized logistics service providers to corporate solutions with several locations, our solutions are used in barcode- or data-radio-supported manual warehouses to highly automated distribution and product centres. Especially in complex systems with different storage technologies, the advantages of the solution come into their own.

**configurable**

SuPCIS-L8 already offers all the basic package offers all essential functions to manage a efficiently and optimally and optimised: multi-client, multi- and multi-user capable.

The warehouse topology is configured in the system, as are the business processes. In addition to the basic package extension modules and adaptations to create individual solutions can be developed.

**efficient**

Our warehouse management system SuPCIS-L8 offers all Intralogistic components for efficient warehouse management:

- Storage location management
- Stock management
- Batch tracking
- Traceability
- Order picking
- Dispatch control
- Loading scanning

SuPCIS-L8 optimises processes in the warehouse, making them faster and more efficient

### independent

SuPCIS-L8 can be operated independently. As a rule, however, it is integrated into the existing system landscape (e.g. SAP, Hightex, AX, Navision, TXT). Over 40 different host systems have been connected via standardised or certified interfaces. SuPCIS-L8 is available on Unix, Linux and Microsoft Windows servers.

### available

SuPCIS solutions are characterised by high availability. They run around the clock. You can count on that. Just like our service: 24 hours a day, 365 days a year, if you wish. The possible downtime of your ERP no longer plays a role in the warehouse.

### international

Our solutions are used internationally and are also available with English, Dutch, Italian and French user interfaces. Further languages are easy to realise.

SuPCIS-L8 offers long-term investment protection through modern architecture.
