

WMS ready for Logistics 4.0!

An innovative software, that looks into the future

“ The best warehouse is the one that does not exist ”

“ Warehouse 4.0 will be connected to the external world and it will be controlled by systems ”

These assertions are opposed: on one hand, warehouse optimizes itself in terms of spaces and costs by **minimizing stocks**, so it is better to keep a lean warehouse, on the other hand the warehouse has to provide **availability** and **responsiveness**, with **automatizms and interconnections to the external world** never thought until today.

Logistics should **evolve from cost to profit centre** and, to do that, it can follow two main streams: **automation and integration**.

MOX SOLUTIONS, specialized in **automation and integration processes**, suggests **STOCKFORCE** solution for any type of company that need to **manage in real time operational flows** and **items in warehouses**, everything integrated with ERP system and e-commerce site.

STOCKFORCE product

- ✓ developed with “web oriented” technology
- ✓ interfaced with **all mobile platforms** (from Microsoft systems to the recent Android systems)
- ✓ It offers **ergonomic interfaces** on different type of devices (**PDA's, tablets, smart devices**)

- ✓ **Intuitive look**, sound notifications when certain events occur, attention to functional screen details proposed by STOCKFORCE, all this allows to reduce the training time of the warehouse staff
- ✓ **All the most common type of barcodes / QR-codes**, including GS1/UCC 128 codifications, are managed
- ✓ **Notification system that can be integrated with logistics flows** to report in real time to the staff occurrence of meaningful events (order completed, product out of stock, low level of item stock, mission not yet activated, etc.)

Benefits and more functionalities

- ✓ **warehouse is integrated with e-commerce sale processes**, speeding up the order fulfillment
- ✓ WMS system manages **missions activation independently**, with user-defined logics
- ✓ The system **is configured accordingly with operation type** and not vice versa
- ✓ **Quick integration** with major **carrier providers**

- ✓ **Automation** on order portfolio with **analysis and planning of all delivery dates**
- ✓ **WMS activities** customizable accordingly with logistics company flows
- ✓ Specific functionalities for **shelf-life, batch management, serial and path number management, kit management**
- ✓ **Batch reservation** for specific customers and **location reservation** for specific items, **payload unit management**, receiving note via web console
- ✓ **Statistic reports** for logistics activities and analysis in goods flow

Our products

- Catalogue
- Product Data Management
- Dynamic filters
- Product comparison
- Dynamic content reports

ShowK | Shows and sell your products

- Off-line sales orders
- Daily schedules and maps
- Receipts management
- Multimedia Catalog
- PDF orders

SellMore | Mobile and Offline Sales Force Automation

- Optimized picking
- Simultaneous picking & packing
- Cycle counting for inventory
- Batch and serial number management
- Label printing from any industrial printer devices ZPL compatible

Stockforce | Move and control products in your warehouse

- Delivery planner
- Dynamic orders reservation
- Automatic mission release
- Control of picking activities

Stockforce Plan | Plan, release and control warehouse activities

- Easy and fast solution for Industry 4.0 certification
- Through MOX.BOX hardware, quick installation
- It connects itself to most existing PLCs: view the data and the certification is done!
- Tablet devices for data entry if there is no machine interfaces

4.0 FACILE | We satisfy all industry 4.0 requirements

- Multi device
- Managed by roles
- In/out quantities and execution times factory tracking
- Component label print
- Batch and serial number tracking

Factory | Automate manufacturing execution system

Integration

- Multi ERP integration
- Multi device
- Multi platform
- Native cloud solutions
- Open source technology
