Warehouse Management
Software with more than 2,500
Logistics Functions Standard

viastore SOFTWARE: your WMS and WCS Partner

From simple manual warehouses to highly automated distribution centers, **viastore's** Warehouse Management System (WMS) and Warehouse Control System (WCS) can handle any conceivable warehouse type and any type of logistics processes.

The Benefits for you:

- Ergonomic and intuitive to use
- Accelerated order throughput
- Reduced inventories
- Increased transparency, efficiency, process reliability and picking quality
- Integration through configuration
- Easily scalable
- International 24/7 help desk

Increased productivity in warehousing, production and distribution

With the **viadat** Warehouse Management System (WMS) and Warehouse Control System (WCS), **viastore** provides modern, high-performance, proven and future-proof standard product software for managing and controlling the entire intralogistics.

Due to its modular structure, the warehouse software is suitable for small systems with low turnover to huge distribution centers with several thousand order lines a day. It can be used for highly automated as well as in conventional manual or forklift-operated facilities.

Leverage your operations with:

- Reduced logistics costs
- Increased process reliability
- Optimum use of the warehouse resources
- Permanent monitoring of processes and inventories
- Complete traceability
- Support of decision making in the warehouse

viadat

- Cartonization
- Order picking
- Value added services
- Weight check
- Consolidation
- Packaging
- Shipping
- Customs documentation

Cycle count

- Inbound cycle count
- Cycle count by date/spot samples
- Permanent cycle count

Control station

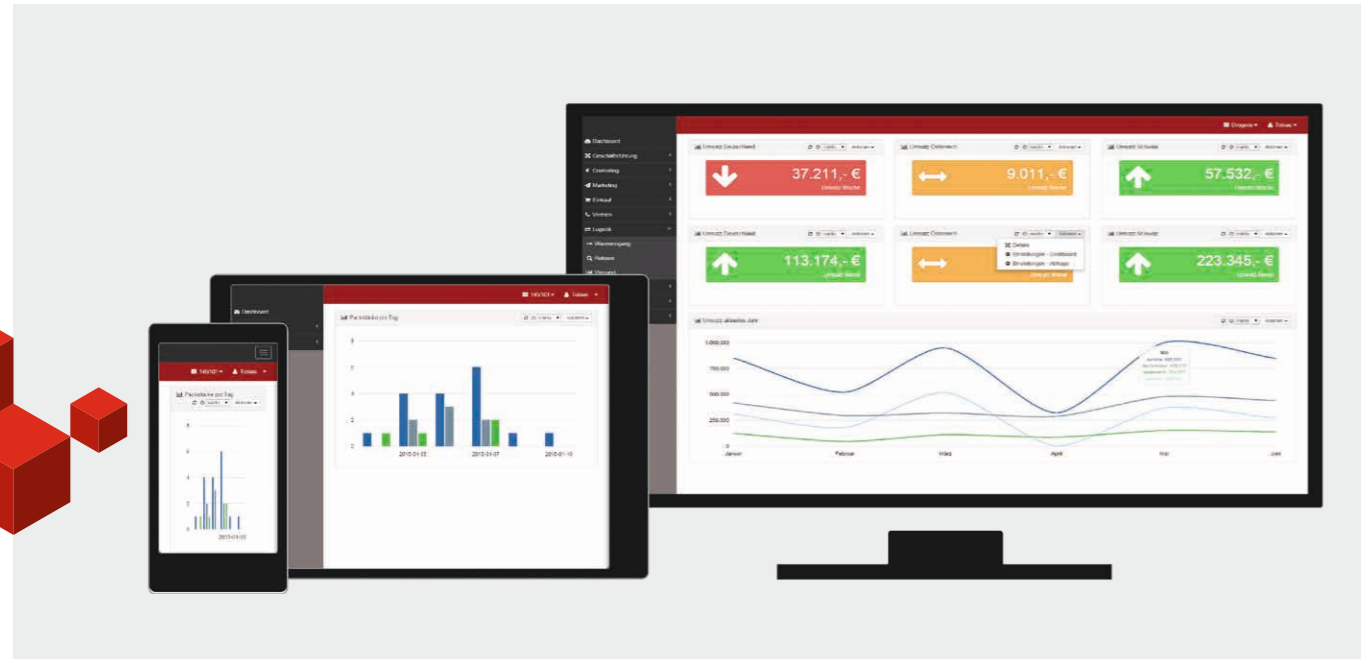

- Statistics and Key Performance Indicators
- Resource management
- Energy efficiency
- Interface monitoring
- Warehouse configuration

Your solution from a single source

Guaranteed Success.

Transparency, flexibility and efficiency through the **viadat** reporting tool

The **viadat** reporting tool allows you to use all the data of your warehouse or distribution center for analysis, clearly structured representation, and decision making. You are not confined to only the data of your WMS, but can combine it with the data from other sources, such as your ERP. You can individually determine the design and the contents. You can generate reports tailored to your requirements.

The reports are graphically displayed on a specially designed web interface, and a responsive design allows for easy use on mobile devices and tablets. This means you always have transparent access to your figures, data and facts wherever you are – and a valuable basis for monitoring and decisionmaking.

Market leaders rely on our software experience

The right software for your warehouse:

Paper-based picking

Person-to-goods order picking

Goods-to-person order picking

Robotic order picking
