Intensified digitization with S/4!

Just like in any other field the opportunities offered to logistics will also raise **new questions** with IT and Management.

Which systems can be used alongside S/4HANA®?

What options are there with respect to migration?

How can a decentralized system be linked to S/4HANA®?

What's new in the embedded system variants?

In a joint strategy workshop, we will develop **your customized roadmap** to S/4HANA® for logistics. We will have an eye on:

- The roadmap prescribed by SAP
- Baseline situation, infrastructure and target architecture
- Potential migration scenarios

The migration strategy and potential next steps will be developed for you.
